

FTTP connections made easy

What is an FTTP connection?

- FTTP (Fibre to the Premises) is used when fibre optic cabling connects the **nbn**™ network directly to your home.
- Fibre Optic Cables are connected directly to an **nbn**™ utility box that's outside of the premises. Then, the **nbn**™ network is connected to an **nbn**™ connection box inside your home.

What equipment will you need?

- To connect to the **nbn**™ network via an FTTP connection, you'll be supplied with an **nbn**™ utility box, and an **nbn**™ connection box.
- Check with your phone and internet provider to see if your existing modem will work with the **nbn**™ network. In some instances, your provider may supply a new one.
- **nbn** doesn't currently charge you for a standard installation. Ask your phone and internet provider if there are any additional fees.

How to connect

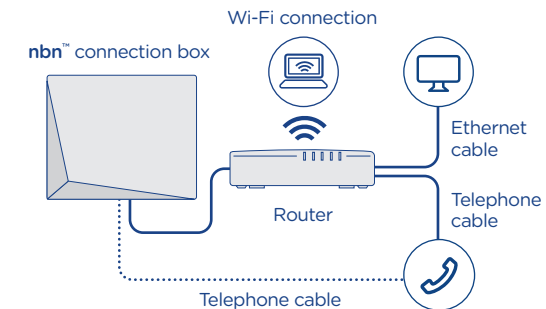

- Order a plan over the **nbn**™ network from a phone and internet provider.
- A connection date is given by your provider.
- Your phone and internet provider will arrange for your connection to the **nbn**™ network. You will need to be home on the day of your connection.

*Note: **nbn** is a wholesaler. This means you can't purchase your phone or internet from **nbn**.*

What happens after installation?

- Once active, connect to the **nbn**™ network using your provider's router and the instructions from your provider.
- If required, connect your home phone and other devices to your router. Alternatively, connect your phone directly to the connection box.

What if you have problems after connecting?
